## December 2014's monthly index of economic activity, IMACEC.

According to preliminary information, in December 2014 the IMACEC increased 2.9% over the same month the year before. The seasonally-adjusted series rose 1.0% with respect to the previous month, and 3.1% in twelve months. The month came with the same number of working days as December 2013.

The result reflected, mainly, an increase in services and trade activity, and greater value added from mining.

In accordance with the calendar for the release of National Accounts figures, preliminary GDP results for the year 2014, together with revisions to first- second- and third-quarter figures, will be published next 18 March.
