

## PRESS RELEASE

---

Friday, 5 February 2016.

### **December 2015's monthly index of economic activity, IMACEC**

According to preliminary information, in December 2015 the Imacec rose 1.5% over the same month a year before. The seasonally-adjusted series increased 0.8% with respect to the previous month, and increased 1.5% in twelve months. The month came with the same number of working days as December 2014.

The result reflected, mainly, increased value added from services, an effect that was mitigated by the drop in mining activity.

In accordance with the calendar of National Accounts diffusion, preliminary GDP results corresponding to the year 2015, together with revisions to first-, second- and third-quarter figures will be published next 18 March.
