

PRESS RELEASE

Tuesday 5 March 2015

March 2015's monthly index of economic activity, IMACEC

According to preliminary information, last March the IMACEC grew 1.6% over the same month a year before. The seasonally-adjusted series dropped 0.3% with respect to the previous month, and increased 1.2% in twelve months. The month came with one working day more than March 2014. The result reflected mainly the higher value added from services, which was partly offset by the drop in mining and manufacturing activity.

According to the calendar of National Accounts publication, preliminary GDP figures for the first quarter of the year will be published next 18 May.
