

## PRESS RELEASE

---

5 November 2013.

### **September 2013's monthly index of economic activity, IMACEC.**

According to preliminary information, last September the IMACEC rose 3.9% compared with the same month a year before. The seasonally-adjusted series dropped 0.8% with respect to the previous month, and increased 4.1% in twelve months. The month came with one more working day than September 2012.

The result reflected, mainly, dynamism in mining and trade activities.

According to the pre-established public calendar of National Accounts dissemination, preliminary GDP figures for the third quarter of this year, as well as revisions to first- and second-quarter figures, will be published next 18 November.
